

Event Description:

There will be 25 stations and you will be asked two questions per station. To prepare for this event you will need to study cell structure and function. During the event you will be asked a variety of questions that will include examining and analyzing microscopic pictures. You should be familiar with cell transport, organelle functions, cell communication, cells associated with human body systems and cellular reproduction.

Event Scoring:

A point will be given for each correctly answered question.
